

Solution Brief

Cyber Observer and Microsoft Teams Integration

Gain visibility, and improve cybersecurity management

Challenge

Today's challenging cybersecurity landscape offers an over-abundance of cybersecurity tools. As the number of breaches proliferates, so have the solutions and technologies designed to stop them. The state of cybersecurity is not getting easier to manage, despite enterprises and organizations worldwide spending more money than ever on new technologies and solutions.

Designed for CISOs and senior InfoSec managers (such as CIOs, C-level managers, risk officers, SOC managers and IT Infrastructure personnel), Cyber Observer empowers leadership with a **unified dashboard** of their entire cybersecurity ecosystem. Cyber Observer can be fully deployed within an enterprise in a few hours, enabling easy **identification** of **weaknesses**, **reduction of mean-time-to-detect (MTTD)**, **prevention of breaches**, and advancement of your organization's **cybersecurity posture** and **maturity**.

Solution

Cyber Observer's partnership with Microsoft enables CISOs to better manage their cybersecurity ecosystem. They receive alerts from Cyber Observer on the key aspects and issues in Microsoft Teams such as **configuration**, **incident** and **investigation management**, **access control**, **password policies**, **user** and **role administration** and more. This joint effort helps enterprises manage their cybersecurity environment and **continuously monitor their cybersecurity ecosystem posture**.

KEY FEATURES

Identifies cybersecurity tools that are misconfigured, malfunctioning, or missing

Finds security gaps and provides recommendations for fixing

Builds an ongoing security program to ensure alignment with new threats

Uses continuous analytics to send alerts when there are deviations from normal behavior

Automatic reporting

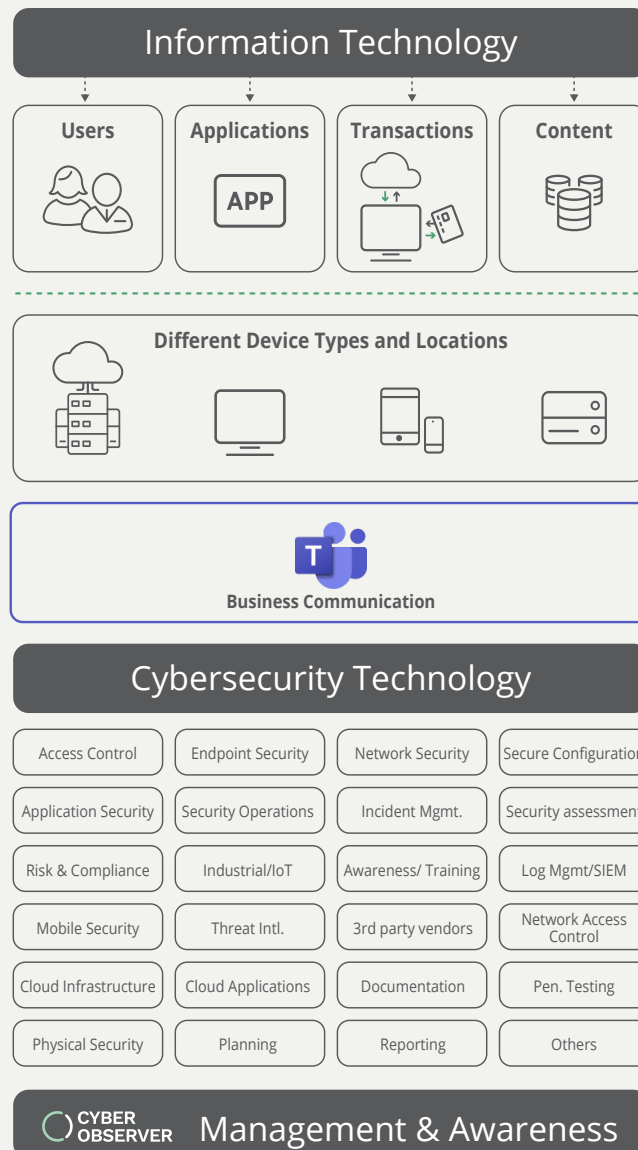

The integration between Cyber Observer and Microsoft offers CxOs powerful and effective **resilience visibility** along with **compliance validation** and **controls**, to secure and monitor Microsoft Teams in an unprecedented manner.

Cyber Observer deploys to the corporate network automatically, in a matter of a few hours, predefined with security domains and CSC measurements to deliver three unique cybersecurity ecosystem views:

- First, it provides organizations with the best indicators of the cybersecurity tools that may be **misconfigured**, **malfunctioning**, or **missing** and should be added to provide complete cybersecurity protection.
- It then **reveals the security gaps** that exist in each security domain and **delivers continuous proactive recommendations to close these gaps**.
- Finally, Cyber Observer’s machine learning analytics engine continuously calculates online measurements that represent normal behavior, and then **alerts when a deviation from normal behavior is detected**.

Fast and Secure Deployment

The Cyber Observer connector for Microsoft receives security and configuration data from the Microsoft Teams server via a secure REST API.

Key Features & Benefits of This Integration

- **Cyber Hygiene Analysis and Reporting for Managers:**

Alerts and reporting regarding Microsoft Teams current configuration implementation status based on vendors' and security standards best-practices, including security configuration issues, incidents and investigations management, admins and roles administration, and more.

- **Reduced Incident Analysis Time:**

Cyber Observer provides continuous alerts on deviation from normal behavior in terms of Microsoft implementation and effectiveness as well as continuous monitoring of relevant security issues in near real-time.

- **Continuous Incident Response:**

- Provides the CISO and other relevant managers in the organization, as well as the Microsoft Teams technical owners with continuous mitigation recommendations and steps to improve, for securing and monitoring Microsoft Teams implementation, effectiveness, maturity and resilience from a management perspective in an unprecedented manner.

- **Customizable Views and Reports**

- Cyber Observer is highly customizable – all views and reports could be modified to the organization's needs and structure. The integration between Cyber Observer and Microsoft Teams offers CxOs powerful effectiveness and resilience visibility, as well as compliance validation and controls.

Key Use Cases

1 Detailed information on insecure settings

- Allows editing or deleting of sent messages
- Allows members to add or edit channels
- Allows members to add, edit or remove tabs
- Allows members to add, edit or remove connectors
- Allows members to add, edit or remove apps

2 Detailed information on insecure networking issues

- Number of Teams Network sites
- Number of Teams Subnets
- Number of trusted IPs
- Number of Teams Wi-Fi access points
- Number of Teams Switches in network location
- Number of Teams Ports in Networks locations

3 Detailed information on insecure policies

- Anonymous users can join a Teams meeting is on
- Policies that allow to delete sent messages
- Policies that allow URL previews
- Policies that allow to upload custom apps
- Policies that allow external participants to give or request control

About Microsoft

Microsoft Corporation (Nasdaq: MSFT) is one of the world's leading technology companies with products that include the Windows operating system, Office productivity applications, and Azure cloud services. LinkedIn, its business-oriented social network, is used by millions to make connections. Outside the office, Microsoft's Xbox gaming system is second only to Sony's PlayStation. Microsoft's customers range from consumers and small businesses to the world's biggest companies and government agencies. Geographically, Microsoft's revenue is evenly split between the US and the other countries. Microsoft founded in 1975.

About Cyber Observer

Cyber Observer is the premier critical controls monitoring (CCM) solution that simplifies the way cybersecurity tools are monitored and managed. Cyber Observer integrates hundreds of popular cybersecurity tools into a single intuitive interface that enables security and risk management executives to continuously monitor their security tools and improve their cybersecurity posture in alignment with cybersecurity, business, and regulatory frameworks.
